

G3T E-phone™ Launch

E-phone™ Launch, 19th December 2005

G3T announce the Launch of their revolutionary E-Phone™ Broadband Internet Telephone

A portable plug & go handset allowing FREE calls over the Internet to other E-Phone users AND to landlines in over 19 different countries as well as low cost calls to landlines and mobiles anywhere else in the world

Midlands based telecommunications provider, Group 3 Technology Ltd (G3T), announces the arrival of E-Phone™, a revolutionary Internet telephone with a 'built-in' UK telephone number. Calls from the E-Phone™ to other Internet telephone users are FREE as are calls to landlines in over 19 different countries including popular destinations such as America and Australia. Calls to landlines and mobiles elsewhere worldwide are massively reduced with savings of up to 90%. And the best thing is it works like a normal telephone. Handsets are available in a choice of 2 sleek colours. There is also a software version of E-Phone.

E-Phone™ plugs directly into an Internet connection and does not require a PC to be switched on, so it can be operational within seconds. The E-Phone™ is not PC reliant, unlike other Internet telephony solutions. Each E-phone™ is supplied with a choice of geographic or non-geographic UK telephone numbers that can be called from any normal telephone or mobile, and can easily be used by the whole family to make FREE phone calls.

To the users' advantage, any area code can be chosen regardless of location, meaning a London based user can choose to have a Manchester area code. Now calls between London and Manchester will be charged at local rate. The same applies even if the phone is taken abroad. Calls to and from the phone will be charged as if the phone was still in Manchester. There is also no charge to

G3T E-phone™ Launch

receive calls abroad, unlike most mobile networks. An additional benefit of having a phone with a UK area code anywhere abroad is that calls from a mobile that has 'free minutes' included in the tariff will be able to call the E-Phone for free as the call will be classified as a normal UK telephone call regardless of where the phone is actually plugged in, be it Canada or Brazil.

E-Phone™ uses G3T's patented End-2-End technology with calls directly between users ensuring better quality. This technology is a more secure alternative to other internet telephone providers such as Skype and Yahoo who use public internet servers to host their calls, which can suffer from privacy, reliability and quality issues when call volumes hit peak times. Calls between E-Phone's™ are always free and direct resulting in a more secure and private method of communication. This security means the E-Phone™ is free from virus and hacking risks and has superior performance with no resource sharing like peer 2 peer based products.

G3T'S CEO, Gerry Leighton explains the unique features of the E-Phone™ “the E-phone is not fixed like your home landline, it can be taken on holiday, when you move house so you will never miss a call or need to change numbers again” He adds “with FREE landline calls to over 19 different destinations as far away as Australia keeping in touch with relatives has never been cheaper or easier!”

Users have complete control over the bill and will be able to pay for calls on a familiar Pay and Go basis. Each E-Phone™ comes with a simple to set up, online pre-pay account which can be topped up using credit, debit cards or PayPal. Users have free online access to full call history and bill information.

Special offers that G3T are currently offering for the launch of E-Phone™ are free landline calls to over 19 different countries based on the equal usage of the E-Phone™ to call numbers that are chargeable. The free calls to landlines will be offered as credit topped back onto the online billing account as long as

G3T E-phone™ Launch

chargeable calls exceed free calls. The second offer that G3T are offering customers is free number rental forever as long as the online top-up account is topped with a minimum spend of £10 a month or £120 a year. G3T's 'fair usage policy' can offer its customers a truly cost effective home telephone solution.

G3T hope to build on the success of the E-Phone™ with the introduction in early 2006 of a range of video phones based on the same revolutionary technology. Users will also be able to transfer their existing number to the E-Phone service early in 2006.

Group 3 Technology (G3T) is based in Aldridge, West Midlands. The company is a leading developer, manufacturer and supplier of advanced communications-related software applications.
