

Group 3 Technology Limited

e2e Technology

A sophisticated technology controlling a suite of Internet Telephony modules which simplify and reduce the capital and operational costs for Internet Phone Service Operators. It is a robust platform enabling delivery of services to high volumes of residential and business consumers.

The product

Voice-over-Internet communications is one of the fastest growing segments of the international communications sector. Group 3 Technology have developed a technology offering significant cost and technical efficiencies not available with solutions currently in the market.

e2e technology allows the creation of a direct encrypted channel between two endpoints, with full NAT traversal, Quality of Service, and Compression.

The technology does not require any Proxy, STUN or Session Border Controllers to be deployed by the Internet Phone Service Operator, and does not rely on hosting any element of call signalling or calls in progress.

e2e includes a full suite of user interfaces including software, IP telephone and an Analogue Telephone Adaptor, all offering a plug and go experience.

Management tools for IPSP's include User Provisioning, Remote Management and Administration, and a Pre-Pay billing platform with PSTN connectivity.

The company and the team

Group 3 Technology is one of the worlds' leading technology companies researching Voice-over-Internet technologies.

Group 3 Technology was established by current CEO Gerry Leighton in December 2000 as the Research & Development division of his telecommunications business, one of the largest privately-owned organisations in the sector in the UK.

In 2002, following the sale of a large part of the parent Group, a dedicated research company was launched under the Group 3 Technology brand, led by a management team with a over 25 years in telecommunications, development and networking knowledge.

Group 3 Technology has 10 employees in offices in Europe and Asia, with a core team of 6 specialised systems engineers.

The company has 3 international patents and several registered trademarks.
